

# COMMUNITY DEVELOPMENT

## Technical Assistance Grants

The Technical Assistance Grant Program provides funding to municipalities and non-profit organizations for professional services from architects, landscape architects, engineers and other design professionals for a variety of projects. Many times, these plans are used by the grant recipient to apply for larger capital funding for the projects.

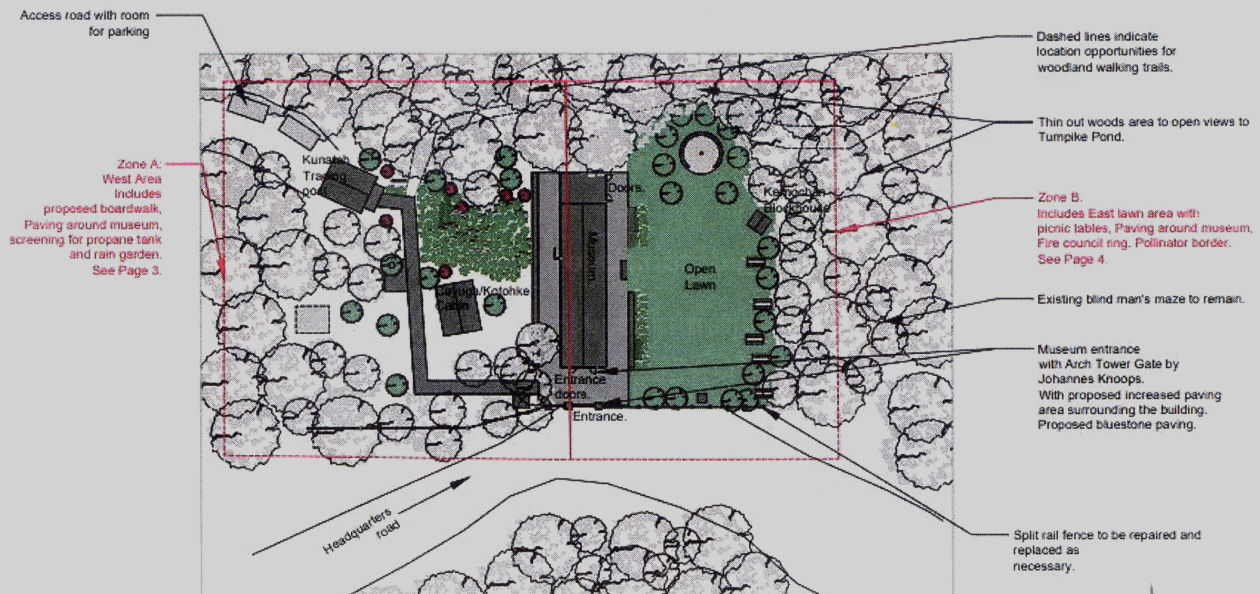

**THE TOWN OF LIBERTY** partnered with the Village of Liberty to retain an engineering firm to help them reimagine Creekside Park and an adjacent parking lot in the Village. The firm created a plan to remove a collapsed culvert and reconfigure the space to be a center of community pride and activity.

**TEN MILE RIVER SCOUT MUSEUM** hired a landscape architect to create a landscape masterplan (below) for the museum campus and grounds at the historic camp outside of Narrowsburg. The plans will guide the museum through a multiyear project to update, redesign, and landscape the property to improve the overall visitor experience.

View from the Lower Deck at the Delaware Valley Opera Club in Lake Huntington

**DELAWARE VALLEY OPERA** received a grant to retain an architect to create plans for their new home in a historic building in Lake Huntington. The architect led the DVO team through research and discovery of options for the long-term renovation of the main stage space. These plans will help DVO realize their permanent home and the creation of the Delaware Valley Opera Center.
